Key Concepts and Likely Answers for Common Exam Questions

Cell Structure and Function

Understanding the differences between prokaryotic and eukaryotic cells is fundamental:

Example Question:

Describe the main differences between prokaryotic and eukaryotic cells.

Typical Answer:

Prokaryotic cells are generally smaller, lack membrane-bound organelles, and have a single circular chromosome. They include bacteria and archaea. Eukaryotic cells are larger, possess membrane-bound organelles such as the nucleus, mitochondria, and endoplasmic reticulum, and include plants, animals, fungi, and protists.

Biological Molecules

Key molecules include carbohydrates, lipids, proteins, and nucleic acids:

Example Question:

What are the functions of proteins in cells?

Typical Answer:

Proteins serve various functions including acting as enzymes to catalyze biochemical reactions, providing structural support, facilitating transport across membranes, serving as signaling molecules, and playing roles in immune responses.

Genetics and Inheritance

Understanding Mendelian genetics and molecular biology:

Example Question:

Explain the concept of dominant and recessive alleles.

Typical Answer:

Dominant alleles are those that express their trait even when only one copy is present, while recessive alleles require two copies (homozygous) to be expressed. The combination of alleles

determines the organism's phenotype.

Photosynthesis and Cellular Respiration

Fundamental processes for energy transfer:

Example Question:

Summarize the overall equation for photosynthesis.

Typical Answer:

6 CO? + 6 H?O + light energy ? C?H??O? + 6 O?

This process converts carbon dioxide and water into glucose and oxygen using light energy captured by chlorophyll.

Evolution and Natural Selection

Understanding how species change over time:

Example Question:

What is natural selection, and how does it lead to evolution?

Typical Answer:

Natural selection is the process where individuals with advantageous traits are more likely to survive and reproduce, passing those traits to offspring. Over generations, this leads to changes in the species' genetic makeup, resulting in evolution.

Common Mistakes to Avoid During the Exam

Misinterpreting Questions

- Read questions carefully to understand what is being asked.
- Pay attention to keywords such as "describe," "explain," or "list."

Neglecting Details
